EDUCATION

University of Central Florida

Bachelor of Information Technology — Minor in Computer Science

Orlando, FL

May 2026

College of Central Florida

Associate of Science in Computer Science

Ocala, FL

May 2022

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, Go, C, SQL, Swift, HTML5, CSS3

Frontend: Angular (components, RxJS, state management), React, Next.js, Tailwind CSS, Bootstrap

Backend: Node.js (Express), Django, REST APIs, Prisma ORM, microservices architecture

AWS & Cloud: Lambda, API Gateway, DynamoDB, Aurora, S3, EC2, VPC — certified AWS Cloud Security Foundations

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Firebase, Supabase, Oracle, SQLite

AI & Automation: Claude API, RAG pipelines, prompt engineering, guardrails, agentic workflows, GitHub Copilot, Cursor

Testing & DevOps: JUnit, pytest, Jest, Postman, Docker, Kubernetes, GitHub Actions, CI/CD, Git/GitHub, Agile/Scrum

Certifications: AWS Cloud Security Foundations (Credly Verified) | IT Fundamentals Pro – TestOut (#6-3C6-2FT66)

WORK EXPERIENCE

The Walt Disney Company

VIP Operations Intern

Orlando, FL

Jan 2025 – Jan 2026

- Operated within Disney's enterprise technology and operations ecosystem, gaining direct familiarity with the data systems, service standards, and cross-functional workflows that underpin Disney's guest-facing and financial operations — providing immediate context for contributing to the Payments & Accounting Technology team.
- Maintained **1,000+ high-fidelity transaction and booking records monthly** with zero data-entry errors through rigorous quality-control workflows, ensuring data integrity across revenue-impacting guest operations and demonstrating the auditability standards Disney's commerce platforms require.
- Resolved system conflicts and data inconsistencies across enterprise scheduling platforms for **100+ engagements per week**, applying production troubleshooting, root cause analysis, and cross-team coordination to sustain a **98% on-time execution rate**.

Orange County Government

Data Analysis Intern — Public Security Clearance

Orlando, FL

Aug 2022 – Jan 2023

- Built Python automation scripts and REST API integrations to extract, clean, and process **10,000+ operational records** from IBM Maximo, reducing retrieval time by **30%** and delivering structured reporting pipelines to government stakeholders.
- Operated under **Public Security Clearance** with strict access-control, compliance, and data-governance standards — directly translating to the security-conscious development practices required in Disney's Payments ecosystem.

Lotus Consulting Firm

Corporate Manager

Orlando, FL

May 2024 – Dec 2024

- Collaborated with cross-functional product, operations, and engineering stakeholders to translate business requirements into scalable technical solutions, reducing workflow bottlenecks by **30%** and contributing to **\$2M in projected revenue**.

Asurion uBreakiFix

IT Technician

Orlando, FL

Mar 2026 – Jun 2026

- Diagnosed and resolved complex software failures across iOS, Android, and Windows at **50+ cases/week** with a **95%+ first-time fix rate**, applying systematic root cause analysis and partner integration troubleshooting under production time constraints.

PROJECTS

FlowSync | React, TypeScript, Node.js (Express), Prisma, PostgreSQL, Jest, Docker | [GitHub](#)

- Built a full-stack platform with a Node.js REST API, relational PostgreSQL data layer via Prisma ORM, React/TypeScript frontend, Docker containerization, and Jest integration tests covering API contracts, error handling, and edge cases — end-to-end delivery across the full stack this role requires.

Turtle Coin — Blockchain & Cryptography Engine | Python, JavaScript, TypeScript, pytest | [GitHub](#)

- Implemented a multi-module blockchain system with SHA cryptographic hashing, proof-of-work consensus, and transaction validation — demonstrating applied understanding of secure transaction design, data integrity, and the cryptographic principles underlying modern payments infrastructure.

Disney VIP App | Swift, SwiftUI, MVVM, Supabase REST API | [GitHub](#)

- Built a production iOS application with secure REST-backed Supabase authentication, real-time data sync, and MVVM architecture across **15+ views** — directly inspired by Disney VIP Operations workflows and demonstrating full SDLC delivery from API design through UI implementation.

Maximo API & Query Toolkit | Python, REST APIs, ETL, SQL | [GitHub](#)

- Engineered a Python ETL and REST API integration toolkit for IBM Maximo enterprise systems — automating data extraction, SQL query execution, and validation pipelines that enforced data correctness at scale.
