EDUCATION

University of Central Florida

Bachelor of Information Technology — Minor in Computer Science

Orlando, FL

May 2026

College of Central Florida

Associate of Science in Computer Science

Ocala, FL

May 2022

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, Swift, Go, PHP, SQL, HTML5, CSS3, Bash

Frontend: React, Next.js, React Native, Flutter, Tailwind CSS, ShadCN, Bootstrap, Redux, Material UI

Backend: Node.js (Express), Django, Spring Boot, GraphQL, Prisma ORM, REST APIs, Pandas

Databases: PostgreSQL, MySQL, MongoDB, Firebase, Oracle, SQLite, DynamoDB, Supabase

Cloud & DevOps: AWS (Lambda, S3, EC2, API Gateway, VPC), Docker, Kubernetes, VMware, GitHub Actions, CI/CD, Linux

AI & Automation: Claude API, Gemini API, RAG pipelines, prompt engineering, agentic workflows, LLM evaluation, Cursor

Tools: Figma, Wireshark, VS Code, Xcode, PyCharm, Postman, Jira, Bash, PowerShell

Certifications: AWS Cloud Security Foundations (Credly Verified) | IT Fundamentals Pro – TestOut (#6-3C6-2FT66)

WORK EXPERIENCE

LinkedIn

Remote

AI Trainer (Contract)

Jul 2026 – Present

- Trained AI models by evaluating and annotating complex datasets, improving response quality, factual accuracy, and reasoning across large-scale AI infrastructure projects with rigorous quality guidelines.
- Validated thousands of AI-generated responses, analyzed edge cases and ambiguous prompts to identify recurring failure patterns, and contributed structured evaluations and documentation to cross-functional engineering and research teams.
- Applied critical thinking and technical judgment to assess LLM outputs across diverse domains and real-world user scenarios, maintaining consistent quality standards while adhering to strict security and responsible AI policies.

Asurion uBreakiFix

Orlando, FL

IT Technician

Mar 2026 – Jun 2026

- Diagnosed and resolved complex software failures across iOS, Android, and Windows at **50+ cases/week** with a **95%+ first-time fix rate**, applying systematic root cause analysis and troubleshooting under production time constraints.
- Performed workstation setup, component-level hardware diagnosis, software installations and updates, and maintained structured service records for all resolutions and corrective actions.
- Managed inventory of **200+ parts and components** with accurate tracking records, reducing repair delays by **25%** and ensuring efficient provisioning across all repair operations.

The Walt Disney Company

Orlando, FL

VIP Operations Intern

Jan 2025 – Jan 2026

- Operated within Disney's enterprise technology and operations ecosystem, gaining direct familiarity with the data systems, service standards, and cross-functional workflows underpinning Disney's guest-facing and financial operations.
- Maintained **1,000+ high-fidelity transaction and booking records monthly** with zero data-entry errors through rigorous quality-control workflows, ensuring data integrity across revenue-impacting guest operations.
- Resolved system conflicts and data inconsistencies across enterprise scheduling platforms for **100+ engagements per week**, applying production troubleshooting, root cause analysis, and cross-team coordination to sustain a **98% on-time execution rate**.

PROJECTS

EcoVest | *Next.js, Tailwind CSS, ShadCN, SQLite/Prisma, NextAuth, Google Gemini API* | [GitHub](#) | [Live](#)

- Built a clean-energy investment platform at UCF's BloomKnights Hackathon, integrating the Google Gemini API for AI-driven investment recommendations, JWT authentication, real-time portfolio visualization, and a full-stack Next.js architecture from design through deployment.

Disney VIP App | *Swift, SwiftUI, MVVM, Supabase REST API, Claude API* | [GitHub](#)

- Built a production iOS application with secure REST-backed Supabase authentication, real-time data sync, Claude API integration, and MVVM architecture across **15+ views**, directly inspired by Disney VIP Operations workflows and demonstrating full SDLC delivery from API design through deployment.

FlowSync | *React, TypeScript, Node.js (Express), Prisma, PostgreSQL, Jest, Docker, GitHub Actions* | [GitHub](#)

- Built a full-stack platform with a Node.js REST API, relational PostgreSQL data layer via Prisma ORM, React/TypeScript frontend, Docker containerization, automated CI/CD via GitHub Actions, and Jest integration tests covering API contracts, error handling, and edge cases.

Three-Tier Web Application | *Java, MySQL, Spring MVC, OOP, HTML/CSS* | [GitHub](#)

- Implemented an enterprise-pattern Java web application with separated presentation, business logic, and data tiers using OOP design patterns, Spring MVC, and MySQL, demonstrating backend system design and relational database integration in a structured, maintainable codebase.
