

Joshua Khooba

Software Engineer | Full-Stack & iOS Development

Orlando, FL | (352) 456-9087 | JoshuaK419@gmail.com | linkedin.com/in/joshua-khooba | github.com/JoshuaKhooba | joshuakhooba.com

EDUCATION

University of Central Florida | B.S. Information Technology, Minor in Computer Science Orlando, FL • May 2026

- Coursework: Data Structures & Algorithms, Operating Systems, Enterprise Computing, Database Systems, Networking, Cybersecurity; Member of the UCF Tennis Team
- Certifications: AWS Academy Cloud Security Foundations (Credly verified); TestOut IT Fundamentals Pro

College of Central Florida | A.S. Computer Science

Ocala, FL • May 2022

TECHNICAL SKILLS

Languages	Python, JavaScript, TypeScript, Java, C, Swift, Go, SQL, PHP, HTML5, CSS3, Bash
Frontend	React, Next.js, React Native, SwiftUI, Flutter, Tailwind CSS, ShadCN, Redux, Framer Motion
Backend	Node.js (Express), Django, Spring MVC, Java Servlets, GraphQL, REST APIs, Prisma ORM, JDBC, Pandas
Data	PostgreSQL, MySQL, MongoDB, SQLite, Oracle, DynamoDB, Firebase, Supabase
Cloud & DevOps	AWS (Lambda, S3, EC2, API Gateway, VPC), Docker, Kubernetes, GitHub Actions, CI/CD, Linux, Vercel
AI & Testing	Claude API, Gemini API, RAG pipelines, agentic workflows, LLM evaluation, Jest, JUnit, Postman

PROJECTS

EcoVest — Clean-Energy Investment Platform | Next.js, TypeScript, Tailwind, Prisma/SQLite, NextAuth, Gemini API • GitHub • Live Demo

- Built and deployed a full-stack paper-trading platform in a **12-hour hackathon** (BloomKnights at UCF — Bloomberg FinTech, OneEthos, and Google Gemini tracks), covering **19 mock equities and ETFs** with instant order fills, live cash/holdings state, and complete transaction history.
- Designed an explainable reallocation engine that scores every holding on clean-energy rating, expected return, and volatility, then proposes sector-capped portfolio shifts with Gemini-generated natural-language rationale.
- Implemented JWT authentication via NextAuth, onboarding-driven personalized recommendations, and interactive price charts with 1D-YTD range selection; shipped to production on Vercel.

Train Yard Simulator — Concurrent Systems Engine | Java, java.util.concurrent, ExecutorService, CSV config • GitHub

- Modeled up to **30 concurrent trains** as independent threads contending for **10 shared track switches**, enforcing mutual exclusion through synchronized acquire/release to prevent deadlock and race conditions.
- Managed execution through a fixed-size thread pool with deterministic shutdown and drove yard topology (60 route configurations) entirely from external CSV configuration.

Three-Tier Distributed Web Application | Java Servlets, JSP, Apache Tomcat 11, MySQL, JDBC • GitHub

- Engineered an enterprise three-tier system with strict separation of presentation, servlet business logic, and MySQL data layers, routing **four privilege tiers** to permission-scoped interfaces after credential login.
- Eliminated SQL injection exposure with `PreparedStatement` across all writes, exposed accountant aggregations through `CallableStatement` stored procedures, and logged every operation to an audit table.

Disney VIP App — Production iOS Client | Swift, SwiftUI, MVVM, Supabase REST API, Claude API • GitHub

- Delivered a full-SDLC iOS application across **15+ SwiftUI views** — authentication, reservations, events, check-ins, and dashboard — backed by Supabase REST services with real-time sync and Claude API integration.
- Isolated model, view-model, and service layers under MVVM and moved all API credentials into environment configuration for secure builds.

Space Portfolio | Next.js 14 (App Router), TypeScript, Three.js / React Three Fiber, Framer Motion • Live Site

- Built a fully responsive personal site with an animated 3D starfield, scroll-triggered motion, and content-driven sections from a single typed constants module; deployed on Vercel.

EXPERIENCE

LinkedIn | AI Trainer (Contract)

Remote • Jul 2026 – Present

- Evaluate and annotate complex datasets to improve response quality, factual accuracy, and reasoning across large-scale AI infrastructure projects under rigorous quality guidelines.
- Validated thousands of model-generated responses, isolating recurring failure patterns across edge cases and ambiguous prompts, and delivered structured evaluations to engineering and research teams.

Asurion uBreakiFix | IT Technician

Orlando, FL • Mar 2026 – Jun 2026

- Debugged software and hardware failures across iOS, Android, and Windows at **50+ cases/week** with a **95%+ first-time fix rate** through systematic root-cause analysis under time pressure.
- Tracked **200+ parts** with quality-control procedures, cutting repair delays **25%**.

The Walt Disney Company | VIP Operations Intern

Orlando, FL • Jan 2025 – Jan 2026

- Ran backend scheduling for **100+ VIP itineraries weekly** across enterprise platforms, resolving real-time data conflicts to sustain a **98% on-time execution rate**.
- Processed **1,000+ records monthly** with **zero data-entry errors** via repeatable QC checks.

Orange County Government | Data Analysis Intern

Orlando, FL • Aug 2022 – Jan 2023

- Automated extraction of **10,000+ infrastructure records** from the IBM Maximo REST API into structured CSV datasets with Python, cutting retrieval time **30%** under a Public Security Clearance.
